

The other night, or early morning, to be correct, I turned on the rig to see what was happening on 40 meters. Of course our phone segment was full of hetrodynes, so I listened below 7100mhz. First, I heard a DL calling CQ, which was answered by an EA7 on the same frequency. Then a G called, and was answered by a 6W8 and some European stations, again on his own frequency. On listening, I found that these stations, which were operating transceivers, could not work split frequency. This gets me to the point I wish to make. Some years ago, the forerunner of Canad-X, the Ontario DX Association, submitted a proposal to our Canadian ARRL director requesting the relocation of our phone sub-band, so that part of it at least, would overlap the frequencies used in other parts of the world. He refused to pass it on to Ottawa, since it might perhaps conflict with the wishes of the U.S. representatives. Now however, the picture has changed greatly. The ARRL has instituted the 5 Band DXCC award, and it seems to me that the only way we can work these other countries on SSB is to spot them on their frequencies. Therefore, the time is ripe for a change in the phone sub-frequency allotments and our proposal should be submitted, with all the persuasive powers that our representative is capable of mustering. If you have any feeling on this matter, WRITE TO NOEL EATON, WITH A COPY OF YOUR LETTER TO CANAD-X, MAKING YOUR WISHES KNOWN.

Bill Halliday VE3UX
(2nd VP-Canadian DX Assn)

KERJUELEN The new operator for FB8XX, Julien, arrived on the island on January 11th Has been reported as working below the American phone band on 20 meters. Do not confuse his QSLing (Julien) with those for the former operator, Maurice, reported elsewhere in the bulletin.

INDONESIA YBØAAB, Gene, most active of the YBØs judging by reports. Reported to be frequently found around 14321kc from 1230Z working into the 4th Call Area. QSL...this is right.... is c/o the American Embassy, APO San Francisco 96356.

HH9DL Much doubts expressed by some as to the authenticity of this station for his 15/10m c.w. operations....beam heading opposite to what it should be....never answers W/Ks, usually working Africa/Europe. It is reported that the actual operator of HH9DL, DON, is usually running patches, answers the good W/Ks and seldom works c.w.
Anyone with information on this operator that might shed some light?

IVORY COAST TU2BB reported at 21260kc at 1800Z. Name is Felix and QSL to CBA.
