

WEST COAST DX

Bulletin

October 5, 1971

40-71

YEMEN 4W1 continues to come through a couple of times a week, being at 21290kc last week from 1700Z and with the Western Reaches getting through around 1800Z. The full name of the operator there is Klaus Puer and he will be in Sana for another year. QSLs go via DJ9ZB who say that it will be late in October before QSLs are being received by those who worked Klaus. Previously a large number of stations were able to get through on September 23rd.

BHUTAN JA-stations continue to report Yonten coming through from AC5TY with an a.m. signal. His favorite frequencies are reported to be 14158, 14185, 14195kc in the 1400-1500Z time slot. He is getting selective to some degree and last week was asking for Africans only.

Those working AC5TY and wondering about the validity of QSLs in Bhutan need not worry. His brother-in-law is the Director of Posts and Telegraph there in Bhutan. Yonten is presently looking for a couple of 5 to 10 kw transmitters for broadcast use on medium-wave bands and a half to a full kw for his own use on SSB. Bhutan recently established relations with a number of countries, including Switzerland and the U.S., and he is working on developing a communication system with the overseas ministers for Bhutan.

Present gear includes a BC-610E, Mark IV, and a BC-342....the latter needing a few parts right now.

TEN METERS This band is showing some surprises and within the last month has come to life with somewhat of a minor bang. Note that ten meter contacts are being reported with Europe and Africa, the best time apparently being in mid-morning. Check the reports from Ol' Red Eyed, there may be a few surprises there and note that to some areas fifteen is more productive than 20mtrs is at any time.

MANIHIKI ZK1MA due to return from his travels this week, the schedule is for Tuatai to be back under familiar skies on October 5th. He should resume operations shortly after that time.....start watching around 0400Z in the evenings. With the resumption of operations, Clyde-W6KNH, will handle the future QSLing.

KURE The big effort over the CQ WW DX Test weekend is still on and KH6HCM anticipates no problems in getting a big total from Kure. There has been a change on the QSLing and KH6BZF will handle the QSLs for this effort. Lee has managed to pick up the logs for much of the past effort from Kure and this rounds out things.....if you are looking for a Kure QSL, try it via Lee.

The frequencies will be 28525/21260/14210/7205/2805kc and listening as directed. There will be some advance action from Midway October 21-24th signing W7UXP/KM6. Prior to the CQ Test they will be running phone patches for the personnel on Kure and they ask assistance in this warm-up operation.

QSLs TA3GB is presently in Sweden signing W2GBX. Anyone needing a QSL for TA3GB should go via W2FXA. VU7US QSL cards for the Laccadive effort last Spring have started to filter through. W5UBW is QSL manager for 7Q7GB...who presently is home for six months leave. ZD6AF from Swaziland QSLs via JA0CUV/1....and this includes and ZD5M QSLs needed. Tack goes to... Tack Kumagi, Box 22, Mitaka, Tokyo. K6GAK, Richard Garren at El Cajon, Calif. is now handling the QSLs for EA8GK, Antonio. Antonio also looking for a pair of 6GJ5s and a 100kc crystal.

REPORTS FROM RED EYED LOUIE.....

BOY SCOUT JAMBOREE This will be on the air next weekend, October 16-17th. If you jump in do not be confused by their use of local time rather than GMT. Frequencies to watch for HB9BS in Geneva and TI2CIE in Costa Rica are:

C.W. 3590/7030/14090/21140/28190kc SSB: 3740/7090/14290/21360/28990kc

U.S. stations will be found around:

C.W. 3590/7030/14090/21140 and 28190kc. SSB 3940/7290/14290/21360/28990kc.

As old Bob would often say....BE PREPARED

OH-DX.... A recent note from OH2BH indicates that all the QSLs for the 3C1 and 3CØ operations have been checked against the logs and things will move fast on the QSLing. Martin indicates that he has not given up DXpeditions in spite of malaria and married life and hopes for something next year. 'Mali' island is still in their plans and they do hope for something there some time in the future. The OH-DX Foundation is down to a paper organization with the bank still holding some paper on a loan for the efforts last year. \$5100.00. was spent in the Africa effort last year and they are still trying to recoup the expenses on that one. Something will hopefully come in future OH-DX efforts....they did establish an enviable record on their Fernando Poo and Annobon efforts.

SHORTLY NOTED This issue has been somewhat difficult. The staff flew in from Southern California Friday night after a week at Cal Poly. Enthusiasm flags when you are tired and this week has been a chore. Suffer with us until we get our strength back. British Phoenix still expected in October....VRLAB and VR1W. VE7IR/XU went QRT. Future possibilities looks good...one report says that XU8VS license already issued. ZS6DW says he will be at 3799kc/0400Z daily and HKØBKX now has 40/80 possibilities.
