

Red Eyed Louie's West Coast DX Bulletin

+++ +++ +++ +++ +++ +++ +++ +++ +++ +++ +++ +++ +++ +++ +++
November 14, 1972 46-72

BOUVET It is reported that Norway will have a scientific group going to Bouvet sometime in January to study the geological features of the rock there in the south Atlantic. At this time the planning for this trip are awaiting the allocation of funds by the Norwegian government for the study.

Two calls are reported as having being assigned for the trip, 3Y4CG and 3Y4DQ. If this one continues to develop, more information should be coming out before long.

A few years back the south African government did sign an agreement with Norway which would allow the establishment of a south African weather station on Bouvet. From time to time reports surface that the planning continue for the establishment of the weather station and this may come one of these months. The period ahead for the next several months would be the better period for landing on the sub--Antarctic spot.

HEARD The USS ELTANIN, KC4AAD was off Tasmania a week ago and headed towards the Indian Ocean where the plans are to stop at Heard Island in the coming weeks. However, the vessel has encountered some problems, the fresh-water supply went down and the ship had to rely on emergency supplies. The vessel will have to replenish its water supply and there has been a report of some engine room problems with a generator damaged by moisture and a minor fire. VK0AAD is reported to be the call assigned for Heard... The scientists aboard the ship still wish to make the 36 hour stop on VK0-Heard and the ship does have the Australian license to operate. The time around November 20th had been mentioned as a possible arrival time in the vicinity of the island but this may be put back a week or so.

BATTLE GROUNDS The Minerva matter appears far from dead and anyone who worked Don Miller there a few years back should not burn the QSL card as yet. After the claim of Tonga of sovereignty over the reefs back in June, the Minervans took their claim to the south Pacific forum (similar to the organization of American states) where the matter still rests. However, the island group is still trying to settle the matter amicably with Tonga pointing out that any development in Minerva would undoubtedly help the not too robust economy of Tonga.

A report in the Orange County (California) Register earlier this month reviewed the whole Minerva matter, noting that the Minervans did have considerable funds and apparently are still proceeding with their plans to develop the rock with some dredging to raise the level of the land due in 1973.

Down in the Caribbean TIME magazine in its November 13th issue recorded the attempt of Nicaragua to stake its claim to Gerrana Bank and the adjacent reefs of Quita Sueno and Roncador Cay.

When the U.S. renounced its claim to the islands which it had shared with Colombia, Nicaragua made its claim. Colombia rushed two destroyers to the islands to back its claims.....but the ships could not find the island of Quita Sueno and the seas were too rough for a landing on Roncador.

Nicaragua says it is not backing down, that the islands are part of the continental shelf which Nicaragua claims for a distance of 150 miles out to sea. Nicaragua may even take its claim to the International Court of Justice!!!

SUNSPOT LOUIE W8ZOK has headed south for a few weeks, possibly to check the orange crop as there have been early reports of a tremendous Florida crop this year which should bring the cost of frozen orange juice down next spring. When Earl returns, the spotted reports will return.....

NORTHERN CALIFORNIA DX FOUNDATION In October the Northern California DX Foundation was incorporated under the laws of California as a charitable foundation. The objectives of the foundation are still in the formative stage but will possibly include all facets of DXing from handling QSLs, to county-hunting efforts and the sending of equipment to qualified DX stations. In the first meeting of the trustees of the organization, it was emphasized that the approach of the foundation will be that "DX means difficulty, not distance". The incorporated status of the DX foundation indicates that contributions to it will be tax deductible. The organizing trustees for the foundation include a large number of prominent DXers including W6B who is the president of the foundation; W6ISQ who is vice-president; W6MAV the secretary, K6KQN the Treasurer and K6DC, W6HVN and WA6AUD who are trustees. This Northern California DX Foundation is regarded as a new approach to the matters of fostering international good will through the DX efforts and it is expected that this group will come up with some interesting projects in the coming year. The address of the present secretary is Vincent Chinn, K6KQN, 738 Washington Street, San Francisco 94108.

SHORTLY NOTED On that 44UA active in the CQ Test, W6CUF is handling the QSLs. Jim offers fast service and this corrects the YV4UA route in the last bulletin..

From the reports OH2BH, OH2MM and OH2BCP ran up a sizeable total of QSLs from Mali, Senegal and Mauretania during the operations the first week in November. QSLs go to OH2NB for these efforts, plus the ZD3X and any assistance to help with the travel and other expenses will be appreciated.

TZ2AC also active from Mali was scheduled to secure that operation last week and then head to TY-Dahomey to operate through this week.

W3HLZ is the QSL route for the HH9DL operation last week....this one was showing up on all bands. W6VBI reports receiving a QSL from HH2JT for a September 10th contact so this one looks good. QSL says he was the first HH-SSBer....but not very active. VQ9/D who ran up a large QSL total from Des Roches goes to Box 193, Mahe, Seychelles. That station on Lord Howe is VK2BQ/LH and goes to Karol Nad, GPO 3209, Sydney 2001. Late call-book also indicates 1/21 Lavender Street, North Sydney 2060 NSW. If there is any question as to why we ran all this information, well, we mixed our BS and QS a couple of times in previous editions and this is an over-kill in correction....

Many still looking for QSLs...such as WA2ACQ and WA2BAV... Apparently the cards were printed as the October issue of CQ-HAM RADIO (Japan) does have a photo of a QSL received by JA4THE....for the 5T5 operation. DL2LP is producing TT8AC QSLs and TL8LI QSLs are coming through....beautiful stamps and often thank-you notes included.

VR1PA might be mouse-trapped by listening at 21397kc from 0130z on Sundays when he runs a schedule with his W6-QSL manager

K54KZ effort ran into more problems than a deserving DXer should but did manage to run up a lot of contacts when things finally settled down. The group was due back in KZ5-land last week.

On Macquarie, VK0RC expects to be there until November 25th and then will depart, his present contract being up then. QSLs go to the VK Bureau.

If the Yemenese settle their difficulties and unite into a single country, Karaman may disappear from the DXCC lists....but hang on to your Mellish Reef cards. This will be possibly straightened out...one way or another.

G5RV was badly injured in an automobile accident recently...delaying his plans to make a swing through North Africa and the Middle East. G31FQ worked all U.S. call areas on 80mtrs during his operation there....except the suffering sixes and sevens. This included 1500 cw QSOs, 200 RTTY and 300 SSB. QSL to DJ5PM and he plans to go to Guernsey in May to sign GC5AWQ. SM2AGD is having problems in getting off Easter Island due to some transportation strikes in Chile. HL9UH is securing and returning to W6-land.

REPORTS FROM RED EYED LOUIE.....

The Watcher of the Lonely Night.....

ARRL The ARRL has petitioned the FCC for partial reconsideration of docket 19162 and is again asking that the FCC make the frequencies from 3825kc to 4000 kc available for phone use by conditional, general, advanced and extra class licenses. The ARRL argues that this band supports the majority of amateur emergency and traffic communications and these activities are presently hampered by the congestion in the top half of the band.

ARRL On the chart explaining the phone band expansion which is on page 79 of the November QST, there is an error in the 21mc frequencies for Advanced and Extra class licenses. The sub-band should read 21270-21350kc, effective November 22, 1972. son of a gun, how did we spot that? There some guy at ARRL who sent us a note.... just signed with his initials.....AR.

The ARRL has also filed its opposition to Docket 19555, stating that the FCC has misconstrued the National Environmental Policy Act.

The ARRL pointed out that the Third Annual Report of the Council on Environmental Quality submitted to the president on August 7, 1972, did not list the FCC among the 16 Federal departments and 36 offices within those departments or agencies which are contained in the list of those agencies involved in environmental regulation and control.

The ARRL claimed that the propagation of radio signals have absolutely no effect on air, water or soil and the only possible connection would be with esthetics. The ARRL pointed out that esthetics was hardly noted in the wording of the Environmental Act.

The whole argument against the proposed rule, which initially appeared to be aimed at the possible adverse effects of 1200 foot towers (TV broadcast that is) is that it should not apply to amateurs who are self-regulatory to some extent and who are not causing environmental problems. It covers some five pages.....this ARRL brief.

WEST COAST DX BULLETIN published every week by the Marin County DX Group. some of the local QRPers were lamenting their hard fates recently, each calling for "...the good old days". They finally put the question to the Old Timer, asking: "whatever happened to those good old days, when the sun was warm and the wind was cool and there was DX everywhere". The Old Timer was not long in replying: "you survived them", he said. son of a gun, we know we survived but where did the good old days go? For \$9.00 a year you might learn that yesterday never was but the NOW DX is all around you. \$10.50 brings the NOW frequencies by airmail. Work that DX todaytomorrow will never something or other....
