

WEST COAST DX Bulletin

November 12, 1974 46-74

NAVASSA Some of the South Jersey operators will be departing from Philadelphia on November 21st, headed for Jamaica. The rest of the group heads out on the 23rd and if all their plans jell they will be putting KC4NI on the air sometime on Sunday, November 24th. The advance group will include K2KA, W2PAU, K2FT and W2ORA. These will be followed by WB2BXV and W2FYS. Their 1500 pounds of luggage includes enough equipment to set up three complete stations on Navassa and they plan to work all available bands, ten through eighty meters with some 160mtr action also planned. The group hopes to get on the air for the last part of the CQ WW CW Test which comes on the 23/24th and should be heard during the closing hours of the test. The operating frequencies will be at the low end of the extra, advanced or general class sub-bands. They will be announcing their listening frequencies, these being 5 or 10khz up as announced. In watching for DX stations, the listening frequencies may be outside the American phone bands. However, the operators will be giving the instructions on where they are listening. On Tuesday/Wednesday and Thursday and Friday, they will operate on 160 meters, the transmitting frequency being 1801khz and they will be listening up 3 to 5 khz. This action will start at 0300Z and they will hang in there on 160mtrs as long as there is worthwhile activity. QSLs go to K2FT, 17 Coles Avenue, Cherry Hill, New Jersey 08034. The costs of this operation have gone a bit beyond original estimates and any assistance which may come when QSLing will be appreciated. This group are all mostly from the RCA Radar Division facility in Moorestown, New Jersey. RCA has issued a four-page press release to the media on this effort and presents an excellent outline of the effort and why radio amateurs make these efforts. They even wind up with Joe Duffin, W2ORA, striking a stance and gazing to the distant horizons, clutching his walking stick and saying like Mallory on Everest. "We are going.....because its there". Any most everyone needing Navassa for something will cheer when KC4NI comes on the air a week from this Sunday. This effort of the South Jersey Radio Association should produce a lot of action. Be prepared!!

TOKELAUS Jim Henderson, ZM7AH, continues to show frequently from the Tokelaus and doggedly tries to clear up some of the demand for ZM7. As of the end of last week, the indicators were that Jim would be operating well into December and his best estimate of his departure from the Tokelaus was put as..."...sometime just before Christmas". Tom Hawkins, who operated ZM7AI for a brief two days, has headed back towards stateside because of some commitments he had to attend to near the home QTH. Jim has moved frequently to lower frequencies and last week advised that on Tuesdays he will be at 3808kc at 0800Z listening for the East Coast. At 1400Z he will be listening for Mid-west stations and for the Western Reaches at 1800Z. When 160mtrs is open, he will try 1810kc, 1910kc and 1875kc. On some of these efforts W5LKN may be in there, not to take any lists but to try to facilitate the operations.

SUNSPOT LOUIE W8ZOK left for the Florida Territory a week or so and will not be back until after Thanksgiving. While Earl scans the sun from the Clearwater area, we will not have the sunspot charts. However, we still have friends at Boulder and will continue with the telecommunications forecasts.

Radio conditions were expected to be moderately disturbed after November 8th, this in association with increased geomagnetic activity. Solar activity is expected to be relatively high and enhance the probability of geomagnetic disturbances. MUFs will be higher than seasonal normals to November 7th but will fall below normals thereafter. Propagation conditions will be further handicapped by increased absorption at lower frequencies. Conditions should improve gradually after the 14th of November. Radio Quality to the 13th is expected to be in the '4' category every day.

During the period up to November 14th the possibility of moderate ionospheric storms has a probability factor of 80%. In looking backwards, there were significant short-wave fadeouts at 1540Z on October 31st and at 1532Z on November 5th. We asked W6TSQ, one of those local QRPers, just what is his system for checking conditions, this coming after Sam worked a 4S7 on eighty a few weeks back. "Friend", Sam said. "I listen". Son of a Gun! What could one say to such an astute observation like that? So all we could come up with was: "Say it again, Sam".

SOUTH GEORGIA Peter, VP8MS, is reported as going to South Georgia and will be there for about three weeks. This should be from sometime around the November 21st period and he will be there until about December 7th.

TRINIDADE There is more reports and this one is that PY1ZAE will be going out to Trinidad the first week in December but will only be there for a couple of days. It is reported that while there he will make a special effort to work the VK/ZL group, this being a needed one for many there.

RUMORS One of the SM-DXers is presently in the Middle East and a monitoring of some conversations below the 14200kc electronic wall brings some interesting speculation. There is cautious information being exchanged, this apparently within a certain group and they refer to licenses for two rare areas. They are careful to refer to these as "Y" or "6". Never the country, just the code. One of the more introspective types looked at these codes and shook his head. "In that area I might hazard a guess that it could mean Iraq and Somalia", he said, "but until I get further input, this is just speculation". Frankly, that what we figured the whole thing is...speculation. But it does raise the anticipatory level for all those who aspire to be participatory DXers.... If something does develop in this area, it will not be a secret very long....

LOGS-GLORIOSO This being the approaching edge of the wishing season, it might be noted that during the last week we have gotten two different reports of efforts to acquire the FR7AM/Glorioso logs so that some QSLs may be forthcoming. Apparently these may be two different approaches, both with some hope of success. If you have thirsted for an FR7AM/G QSL for all these many heavy years, hang on a bit longer. A couple of things might happen. One is that the logs will be pried loose. Another is that maybe someone else will go to Glorioso and will QSL. And they are still accepting FR7ZP for the Don Miller action there in Glorioso eight years ago this November. All this adds up to....Keep hoping because there is not much else you can do right now..

THE FRENCH MAIL CONNECTION This was broken a few weeks back when the U.S. placed an embargo on mail to France. There has been a strike of French postal workers since about mid-October and there was nothing the U.S. could do to move the mail into France. If you have had a letter returned, just hang on to it until the embargo is lifted. The Postal Service will accept it for a second try....or they will refund the postage if you fill out the paper work. The best way is just to hang on to it. If you run into local problems, drop us a line. We'll talk Ted....

12 November 1974

QSL INFORMATION One of the areas where we would like to do better is in QSL information but the time and space often works against this. One of these days we will come up somehow with a solution but meanwhile.....as they say in every bureaucratic stronghold, be it corporate or governmental....."we're working on it".

But here comes a few from the CQ Test area.....

SHORTLY NOTED We had gotten to the point where we were thinking we had mastered the off-set press. After this week-end we must admit that we are not quite ready to write our thesis. We had some problems and the last page was where we ran into them. This is the first page run so that the mailing department can get an early start and though we worked and labored and toiled until well after midnight, it was not a complete success. Maybe the front part of the bulletin will indicate how we met the challenge. Mostly confused.....

QSLs for KC4AAC have been given as a Post Office Box in the Los Angeles area...and it appears that this is the address for Phil...a technician at the station but is not the official QSL route for KC4AAC. This is K2BPP. Those interested in 160mtrs might take a glance towards W1BBs '160 Meter DX Bulletin'. Stew puts it out quarterly and it covers the 160mtr action and the actors. If you are a true-blue 160mtr type, send a sase to W1BB to see how things are on the lower frequencies.

Those sunspot watchers who really worry are locking onto 1982 which might be the peak of the new sunspot cycle. But there will also be a rare planetary line-up of the planets in the solar system, this coming every 179 years. Some astronomers have speculated that this might bring a great increase in sunspot activity including huge solar storms, masses of sunspots and tremendous solar flares. Son of a Gun!! Maybe it would be best to knock off those sun dances in the Palos Verde Hills and start passing out the sunglasses! Someone will always overdo things...

That Arab summit conference found \$150,000,000.00 being budgeted for a 99 year lease on the Perim island in the Bab al Mandab Strait at the Indian Ocean entrance to the Red Sea. This to be leased from South Yemen.

ZM7AH does not have a c.w. filter on the rig and has to use the SSB position when trying c.w. Petrol seems to be the biggest factor limiting the operation as Jim does not have much possibility of an early departure. Bill Eitel has been hospitalized during October but is reported to be coming along well.....thats W6UJ. Jerry Stover, W5AE, of Communications Industries there in Dallas is up for the Board of Directors in the Radio Club of America. It's not that we are campaigning for Jerry, though we are there hoping but someone asked for his address and we lost the note from the one who asked. Everything has an explanation....though sometime a bit obtuse.

During this last CQ WW DX Test, WA5JMK, WB4JEZ and WB5IZN went to Montserrat where they immediately got into a tangle with the customs over their impounded gear. They cleared this up and made 5600 QSOs in the test plus 1000 more outside the test. W5MYA and W5TMN made about 5600QSOs from Grenada

ARKANSAS DX MEETING December 7th...W5QKR for details on whether Southern Arkansas
or Northern Louisiana is paradise transported....
RTTY DX TEST December 7/8th...Alexander Volta Test
CQ WW CW TEST November 23/24th

ARRL At the QCWA Banquet in Orlando, Florida on October 26th, FCC Commissioner Lee disclosed some of the recommendations of the amateur subcommittee making initial preparations for the 1979 World Administrative Radio Conference. This sub-committee has W3OKN, W4BW, K4GTS and W1RU on it and their recommendations include:

Return of the 160mtr band
Eliminate sharing in the 80 meter band
Expand 40 meters and eliminate sharing with h.f broadcasting
Expand 20 meters and eliminate sharing with fixed services.
Expand the 15 meter band by 100 khz
Establish new amateur bands at 10.1, 18.1 and 24 mhz.

Before leaping to your feet and clicking your heels in joy, remember that these are only recommendations from the sub-committee and there are other subcommittees and other interests. However, take joy from noting that a government subcommittee working on this project did come up with this.

W3OKN is E Merle Glunt of Silver Springs, Maryland...W4BW is Prose Walker..K4GTS is Francis K Williams of the Washington, D.C. area and W1RU is Richard L Baldwin of Simsbury, Conn. Dick Baldwin?? Of ARRL???? Son of a Gun!!

In number of Life Members, the Roanoke Division leads with 9.73% of the Life Members and Delta is second with 8.76%. Great Lakes is low on the pole with 4.56%, just under the Canadian Division with 4.83% and Central with 4.94%.

The ARRL has filed on Docket 20111--Commemorative Stations (special events) and 20112, Unattended Repeater Control and in 20113...Crossbanding of Repeaters.
