

DX Bulletin

November 19, 1974

47-74

Their plans are to work both c.w. and SSB prior to the CQ WW CW Test this coming weekend and to be most active during the contest. Bands will be from 160 through ten...depending on what is working. They were hoping to sign FWDAA during the CQ Test but prior to that you might watch for FWDX and FWDIC. Those on this effort include Ron Stockton, WB6LTJ; Gary Apgar, K6RIR; and Don Bostrom, K6YFZ.

CHINA There was a report going around last week that a Norwegian has been given authorization to operate in China and was signing LA7/BY. This was to be on c.w. only and the frequencies would only be 14045kc and 21045kc. There is some skepticism on this one and from all previous experience this might be Canton Slim. However, if you come across him, work them first and worry later.

EGYPT Another Canadian station has shown from Egypt, this being VE3CUD/SU and last week he was being found under a pile-up at 14221kc from 1430Z. He is reported as going to be there in Egypt for a six month tour of duty.

They have been found around 14208kc from 1115Z and apparently on a schedule with ON3TT. One day last week they were at 25° 6' N and 17° 22' W.

SUNSPOT LOUIE W8ZOK is still lounging around the Clearwater country and we will have no charts until Earl returns. But we still have all that esoteric stuff out of Boulder.....

Radio conditions were expected to be moderately disturbed in the middle of last week but should be improving and this should continue gradually until this Wednesday. Solar activity is expected to be low and MUFs will be below seasonal normals through the 16th and near normal thereafter. From the current outlook, the next period of disturbed conditions should begin about December 6th.

Monday to Wednesday of this week the radio quality is expected to be '6' every day. Excess attenuation due to solar flares is expected to have a low probability and the moderate ionospheric storm in progress last week was expected to abate. Conditions did deteriorate from November 11th and this continued through mid-week. Looking back, there was some disturbances, probably caused by a solar flare, and this started at 1414Z on November 8th. Another disturbance started gradually on November 11th and persisted through November 12th. The whole day index got down to a '4' on the 12/13th and then improved over last weekend. The 12-month moving average Zurich sunspot number is expected to have been 27 for October, 25 for November and 24 for December.

Maybe it's time to give some serious thinking to whipping up some local action with your Sundance Encounter Group. We heard that one Palos Verdes Hills Sundance group even had K6GLC out dancing.....and most people had figured that Jim was still snorkeling down Cozumel way. Just see what group action will do....

JUAN DE NOVA FR7ZL, Guy P de la Rhodiere, has been signing /J from this spot and should be there until about the middle of next month. He was being worked last week at 14043kc from 1400Z and indicates that he will be active when possible. QSL for this one go to F8US.

FAKLANDS VP8OA who used to be ZD8RR, is now in Port Stanley and will be there for the next eighteen months. Ron is in charge of communications to the British bases in the Antarctic and this will include a six week trip to the Antarctic starting about February.

Ron is being found on 15 and 20 from 2300Z and last week was at or about 14300kc and 21315kc. He is using a TA33Jr beam and will be active during his stay there.

SOUTH GEORGIA No new information on VP8MS who is aboard the ship John Driscoll and may show up from South Georgia about November 21st. The early information said that Peter would be there for about three weeks. Another report said that the action might not be until a month later....both did agree that he was going so it will be something to watch for.

HAM RADIO OUTLET 999 Howard Avenue, Burlingame, Calif. 94010 (415) 342 5757

This is the Contest Season!! And the Big Guns at HRO are ready to help you figure out how to work those needed ones. As Big Joe Butler, the Hero of Pecan Flat would often say: "Man! Be Prepared!!!". And HRO is the place where they are ready to prepare you for Big Things.

Check with Bob Ferrero, K6AHV, or Big Joe Butler, K6CAZ, for the best in cash prices or top trades. Deal with the Dealers. Deal Big!!

Full Factory/Dealer warranty on YAESU gear. Check the FT101B..always in stock. Full inventories of the top lines in amateur gear. Visit!!

Bob Ferrero
K6AHV

Joe Butler
K6CAZ

STAND BACK!! Don Riebhof, XU1DX, has the antenna situation just about in hand and undoubtedly will lose his QRP standing. Here's what he has.

Don has put up a 105 foot tower with a 4 element 20-meter quad on top. Then he is moving on to putting up a 115-foot tower to fly a Christmas-tree array. This will include an eight element Telrex beam for fifteen, a 204BA for twenty and a three element ten meter beam on top.

There are various wires for the forty/eighty action and he has tuned everything for the CQ WW Test this weekend.

Between the towers Don plans a fixed 80-meter wire beam aimed at Europe with the VK/ZLs on the reverse side.

He also has a Henry linear. Undoubtedly the biggest signal out of Phnom Penh.

CHESTER IN AFRICA Last week we got a note from John (Chester) Lunsford, he who has signed a number of calls including XV5AC/9G1/5T5AC and 6W8. He has also signed W4EVG but that never engendered any pile ups.... Chester writes:

Just a short note from Africa. I have been here for about three months and have traveled to Niger, Senegal, Ivory Coast, Ghana and am now in Mauritania. I have received a license to operate in Nouakchott with the call sign 5T5AC and hope to receive the call 9G1AC in Ghana. I have applied for calls in Senegal, Mali and Upper Volta. Also in Niger but it is a bit hazy on the license situation in Niger just now due to the new regime there. I will be operating from Ghana on all bands with the same gear that I had at XV5AC. There is plenty of room to put up antennas and some contractors are now erecting a good-sized 60 foot tower to start with. I expect to put up some more towers and I expect to put up the big Telrex beam for twenty meters and plan to build a forty meter beam to go over it. I think I will probably put a couple of ten meter phased beams for that band and a couple on twenty. The power limit is 500 watts here. Its really been a ball on twenty and fifteen from 5T5AC. I have been using the KWM-2 and a 30L-1 amplifier along with a HY-GAIN LP-1017 beam that goes from 6.6 to 30mhz. It is supposed to give 13.5db gain but I don't think I am getting that much. The signal reports have been good on twenty, fifteen and ten and I have not worked anyone on forty as yet. I will be looking for the Western States soon and I think that I may have worked a few already. I sure worked a lot of fellows from Saigon and am looking forward to doing it from here in Africa. I hope to open from TT8AC in three or four weeks. I do not know what my schedule will be so it will have to be fluid until something sets. Presently, I go where there is trouble with communication gear and that could put me most anywhere in West Africa. I should be returning to Ghana in early November but will be back in Nouakchott from time to time. My license for 5T5AC is No. 9 and has no expiration date. The gear that I use at 5T5AC will always be in place and will just have to be turned on to put 5T5AC on the air. I am hoping to get to some of the more rare spots while here in Africa during the next three years. I do miss Saigon and the people there.... While here in Africa I will be trying for calls with the suffix 'AC' and if this goes, it will be easy to identify me from various countries. I am optimistic on getting 6W8AC and 5U7AC as they were available when I applied for licenses in those countries. That's about it. Tell everyone that Chester is now in West Africa and getting ready to activate most everything.

73,

/s/ John (Chester)
American Embassy-ACCRA

There's the report from the West Africa Desk. Without a doubt, he was the biggest signal out of Nouakchott while signing 5T5AC.

19 November 1974

SHORTLY NOTED Once one of the subscribers wrote and said that he liked the fact that we were never complaining about things. That remark stuck and it sure cut us off at the pass when he were looking for some self-sympathy on the problems of the ages. But we have to say something and it is not a complaint. It's telling it as Howard likesto declaim... We are getting too many subscribers. Last week we mailed over 900 copies. A couple of years back we said that we figured our capacity was about 800. We were right. And we are getting a bit ragged trying to keep up with things. We are getting typing errors that we do not catch in the rush to get the bulletin in the mails. We are late at the Post Office and they ram the mailing through to get it in the outgoing dispatch. We have never turned away a deserving DXer. But we are having problems with the ones we have. The other job is a full-time-plus one also. The old and tired and gray crew at the WCDXB would like it if we could avoid any more increase in subscribers. Understand..we are not complaining. Just overworked and we do not like the ragged edges we show at time. And that's the last of such for this year.....

XE1IIJ, Scotty, who shows for a good many contests, has been back in Newport, Rhode Island for some schooling there. Speaking of Mexico, ZF1A is on Santa Margarita Is. close to La Paz in Baja California. All off-shore islands in Mexico have the XF prefix which sometimes cause either questions or a pile-up. Last week we put this down as 'ZF1A' in the QSL information. It's XF1A and goes to Box 33, Santa Margarita Island, Baja California del Sur, Mexico. DJ6QT/CT3 goes to the home QTH in Germany. TU2DO will be back in Washington in January and is recovering from the heart problem of a month or so back. That OE2NWL/YK has been consisten in showing on twenty meters ...in the 14225kc area from 1300Z. Some are still looking at YI-Iraq as a possibility and one of these days someone will be able to figure out the way.

Easter Island once was rather common when the U.S. Air Force has a station on the island. Since they pulled out, it is turning into DXpedition territory due to lack of activity. However, the Society for the Preservation of Archeological Monuments in Seattle have announced five 15 day expeditions to Easter Island during 1975. And the accomodations will be in the newly completed Hotel Hangaroa. Prepare!!

Over in other areas, W4BRB reports that 9Y4GS/VP7 operated from the 16th deck of the Oceanus Hotel(South) in Freeport during the CQ Phone action. VP7BC also was in there and ended up with some seven pounds of logs and a multi-million total. We hate to admit it but that was the only station we had time to work in the contest...a 40mtr QSO.

Gene says that anyone interested in a quick DXpedition might look at that hotel. The entire 16th deck available for antennas and there are all the resort lures including legalized gambling. Management is tolerant of the use of the roof. W4BRB gets all enthusiastic about this spot and the reasonable prices. Drop him a line if you want all the details. They did work ZD3X from VP7BC.

Jim Simon, K4KQB, managed 3070 contacts with 113 countries and 36 zones in three days of operation from KG6SX in October. He would have like to have operated more. Jim was in the Philippines a week or so back and advised that QSLs for his operations go to Box 62, Sterling, Virginia 22170.

9M2DQ is back on schedule...look for him at 0000Z at 21345Z. Will take breakers after he's finished schedule. 5T5GS has been on the Africana Net which has been doing a booming business...with some good DX available. 21355kc/1800Z to 2000Z. FY7AE will be there on weekends and ZD3M is expected to check in regularly. They are not all Africans as HH2 and YS1 and HC8 have been there along with Anguilla and the Seychelles. VU7GV, Sulu, was at 14220kc from 1800Z on November 6th. Coming into the Western Reaches with a modest signal. WB9EBO who handles the W9 QSL Bureau will be in YB9-territory in December on some work for his company and hopes to be on the air while there. Jerry will return via Europe looking for action along the way.

Navassa and KC4NI should be on the air this coming weekend and 6Y5LA has chartered a 65' boat to get them from Jamaica to the island. Anyone with information on HV1R who was on this last summer. K9WEH confirms that he helped get the status of the islands in the Spratly group cleared through the DXCC Desk and everything is moving. And we have run out of space and time again and its a dash to get this in the mails.....

LEBANON Martin Laine, OH2BH, and Ville Hiilesmaa, OH2MM, will be in Lebanon for the CQ WW CW Test this weekend and will be looking for another big score. They will be signing OD5IQ with the following frequencies

1820kc 3505kc 7005kc 14025kc 21025kc 28025kc

The operation will be in the single transmitter category.

On the ZD3X effort in the phone portion of the CQ Test, Martin reports that the conditions were good and even on 160mtrs he worked a good number of W/Ks. In that effort from Gambia Martin reports that he ran up about 7 million points which should have put him about 1.5 million over Jim Nigers former world record. Martin did this with 4800+ QSOs and 500+ multipliers. He took four hours out for some sleep which held the total down a bit.. Both ZD3X and OD5IQ can be QSLed to Martins home CBA
