

# West Coast DX Bulletin

November 29, 1977

48-77

BOPHUTHATSWANA VE3FXT and the rest of the crew were gathering last week for the coming independence day at this South African homelands and all the indicators were that there would be all kinds of activity on December 6th.

Actually, they will show at 2200Z on June 5th, this being midnight there in Bophuthatswana. As of last week they were planning to put ten transmitters on the air simultaneously, their aim is to maintain a 24-hour around-the-clock activity.

There will be three transmitters operating simultaneously on twenty meters.

The prefix will be H5—and the following callsigns were lining up to be heard next Monday..

H5JER by Brother Jerry	(7P8BC)
H5FXT by George Collins	(VE3FXT)
H5COA by Jim	(An YL!)
H5AMG by Sid	(ZSLMG)
H5AAW by Danny	(ZS6AW)
H5VCM by Rollie	(K9VCM)
H5QMJ by Tom	(WB9QMJ)

There may be more. A H5IND was also reported as a possibility. The group will try all possible bands from One-sixty to OSCAR. They were insisting last week that they want to operate on all the bands all the time.

Last week VE3FXT was in Lesotho. There may be more information next week but things were definitely shaping up for this possible new one over the Thanksgiving holiday. For those who worry about modes, that H5VCM (K9VCM) prefers to work c.w. over any other mode. ZSLMG will also be found on c.w.

There should be a lot of noise when this one comes on the line. You have a week to warm up. Always remember what Lord Baden-Powell, the Hero of Mafeking, would say in such situations..... Be Prepared!!

LI2B Thor Heyerdahl, who has been heard from on rafts before, is afloat in the Persian Gulf area on a reef raft named the "TIGRIS". The launching spot was at the town of Qurna where the Tigris and Euphrates join. There is no definite destination, the object being to see how far towards, or into the Indian Ocean, such a vessel might make it.

The vessel was heard at 14200kc at 1200Z on November 12th calling for some east coast stations on an apparent schedule. W2KGO and WB2BEE were on frequency but could not hear the expedition station. KP4EKI and KZ5FR did succeed in working LI2B on that day.

The station has been heard since, last Wednesday it was under a tremendous pile-up. The operator is Norm Baker and it is reported that he had a one-time authorization to operate from with Iraqi territory. The raft probably should be in the Persian Gulf by this time.....

SUNSPOT LOUIE Conditions still are rising in Cycle 21 but it is hardly the fast rise in the SSN that was hoped for.

The activity this week has three areas of light activity and one large area. We will be moving into the period of good conditions that existed in early November and you might be alert.

The twelve-month Smoothed Sunspot Number centered on April 1977 was 22.0.

It might be timely to again note that the cycle is defined by the variations in the twelve month running smoothed sunspot numbers. It is not determined by the monthly mean for sunspots.

The monthly mean for about now has been getting into the forties. However, these figures, the monthly mean, refer only to the month in question, the smoothed number is derived from the 12-month figure.

Some have been signing up for correspondence courses with the Palos Verdes Sundancers figuring that if it is 42 in October, it will be out of sight by 1981. That 42 for October refers only to the October and you can see that when it was cranked into the 12 month SSN figures, the number based on April came up with 22.0.

Come to think of it, all this may be confusing to some. Those who may wish to sign up for some of those Palos Verdes Quick-Step routines....all coming to you every week by mail, can ask about the brochure. If the Palos Verdes Sundancers managed to bring you Cycle 21, imagine what they might do with you if you had just a bit of training.

You would learn how to count sunspots for one thing. One of these days we may run the first lesson....how you do count the sunspots. And if you think it is a matter of ...."...one, two, three, four, five, etc", you can prepare to think again.

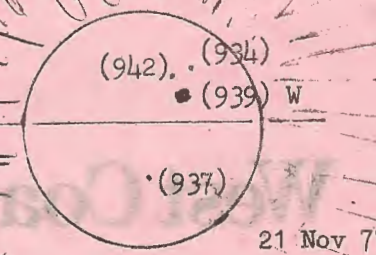

Anyhow, looking for the good days to cycle around again, we will run by you the figures from N4XX...and Ted says that looking down the long weeks toward the Winter Solstice, there will be some good days ahead....and some bad days ahead. Some HN, some LN and some BNs! And in between more of the same. And who says that things change!

November 29th	High....but Low	December 5th	High Normal
	Normal at times	6th	High Normal
30th	High....but Low	7th	High...but with periods of Low Normal
	Normal at times	8th	High...slipping to Low
December 1st	High Normal	9th	Low Normal
2nd	High Normal	10th	Low...with some Below
3rd	High Normal	11th	Low...with some Below
4th	High Normal		

That may keep you hoping. But last Thursday it was around 89....

And up from the south comes the report from K6EC.... Ev still trying to get the Solar Flux over the hundred mark but it seems to be stuck in the nineties. Maybe next week..

Solar Flux			Ap Index		
Nov 7th	92		9	Nov 11th	97
8th	92		5	12th	93

942	1 spot
N36° W26°	10 millionths

29 November 1977

St PIETRO/St. PAOLO CHERADI ISLANDS A formal request to the ARRL DXCC Desk to count this group as a separate DXCC country has been forwarded by Giampaolo Nucciotti, I8KDB, the Award Manager of the Associazione Radiotecnica Italiano.

There was activity from these islands early this year, I7JEX being heard from July 22nd to August 2nd. There was a special call, IJ7ONU, used on July 28th to mark the ARI-UNICEF Day. Since the original operation the prefix IJ7 has been permanently assigned to the islands.

The islands are in the Gulf of Taranto in the Ionian Sea, 40°27'N and 17° 9'E. The request for DXCC country status is based on criteria of a separate and distinct administration. They islands are under the authority of the Italian Navy Department of the Ministry of Defense. Most other territory in Italy is administered by the Department of Interior.

The papers and letter on this request went to the ARRL DXCC Desk in late October. It probably will be some months before any action comes on this request.

DELAWARE/OSCAR 7 K3AO, W4NL and K1FJ are going to put Delaware on OSCAR 7, Mode A, on December 11th and will aim for Orbits 14055, 14056, 14059 and 14060. The downlink frequency will be 29490kc, plus or minus doppler.

The callsign to be used is K3AO/3. Delaware is a rare one on OSCAR and this will be an effort to dry up some of the demand. A one day effort a week from this coming Sunday.

ZM7AH-1974 Jim Henderson who was out in the Tokelaus for some months back in 1974 is now attending the School of Mines at the University of Nevada. Jim has moved several times in recent years after completing studies at the University of New Mexico and he would like to close out the ZM7AH QSL files. Only Jim has the logs.....

He is also looking for some QSLs...inbound...to finish off a ZM7AH DXCC. He needs

Pacific: KB6CU/WB4KSE/KW6/F08ES/F08EH/KC6VE/C21NI/C21NP/VK9RH/ZK1DA  
YJ8CS/YJ8BB and VR6TC

South America/Caribbean: HR1AT/TG9VS/FG7AN/FG7XL/YL4VV/YN1AM/VP7BC/PJ9JR  
8P6AH/8P6FU

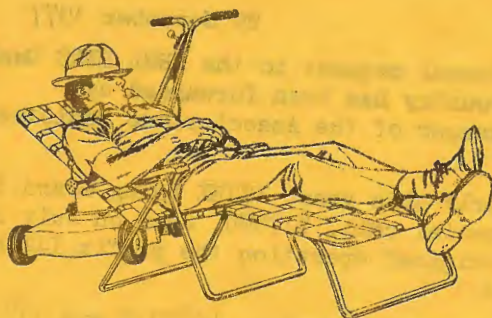

Europe, USSR: GI3JIM/UI8CD/UK0FAD

Middle East and Africa: 9K2AU/OD5HC/EL2FN/S21JA/TU2DO/3B8AX/AP2ZR

Jim's present address is: Jim Henderson, 13490 Mt. Hood, Reno, Nevada 89506. You might catch him sometime at 0230Z at 7203kc--3838kc at 0300Z...or sometimes at 14260kc at 0230Z rather than forty meters.

22 November 1977

**SHORTLY NOTED** We stopped to count the issues of the bulletin this last week. The issue of this November 8th turned out to have been the 500th consecutive issue of the bulletin. We are headed down the last months of our tenth year but at this point we have not missed a Saturday. This includes the Saturday when rushing down to work on the bulletin, we fell down the stairs and broke an ankle.

Are we going to turn out another 500 without missing a week. We have our doubts. One of these times we are going to take a couple of weeks off.....one anyhow. But that is yet in the future.

Some of the expected ones are showing. ZD9GG is on Gough Island....this one showing on twenty just at the phone sub-band edge at 14200kc around 2100Z. QSLs to ZS1Z

WWV, WWVB and WWVH will have a change in their time on December 31st. There will be a positive leap second starting at 23hours, 59minutes, 60seconds Universal Time and ending at 0hours, 0minutes and 0seconds on January 1, 1978.

This comes as a recommendation of the Bureau International de l'Heure (BIH) in Paris.

This is also the exact second that ALXGY has a change in his QSL route. From January 1, 1978, Bob Marsh, K2RU, 87 Sherwood Drive, Brockport, New York 14420, will be handling the QSLs for ALXGY.

We have some club notes....mostly new officers. The willing volunteers ready to do all the work while the others work the DX are:

**National Capitol DX Assn:**

President N4TX  
Vice-prex K3RT  
Secretary W3YY  
Treasurer K3AO

**Northern New Jersey DX Assn**

President W2JB John Bergio  
Vice-prex W2GW George Wright  
Secretary K2CM Brother Patrick Dowd  
Treasurer K2CM Charles Moraller

**Kansas City DX Club**

President W0YR  
Vice-prex W0JU  
Secretary/ WB0EZQ  
Treasurer

The Kansas City DX Club is meeting the last Tuesday of each month. Rudy Metcalf, W0JU can be reached at his home QTH at 4005 Red Bridge Road, Kansas City, Missouri 64137, for more club information.

The National Capitol DX Assn, with N4XX doing the talking, will make a presentation to the FCC on the proposal to ban Ten Meter linear amplifiers and on Type Acceptance of gear. They are hoping that other DXers....and DX groups....within reasonable distance of Washington will get into the act and also make a response to FCC Docket 21116 and 21117. Contact the NCDXA if you need a guide.....

Dennis McCluskey, WB4IWW, is handling the QSLs for TR8MFB and the logs for the first few days of this Gabon operation are already in his hands. The first QSLs have already gone out, this batch of logs running up to October 15, 1977. TR8MFB has received some QSLs direct but has not cards there with him. WB4IWW is shipping some over but this will be a slow route for a QSL.

Leo Haijsman, W4KA, is handling the QSLs for C6ABC on during the CQ WW Phone Test in October and also for 5W1AB. Sase or Sae/Irc needed.

VQ1BC was on twenty meters recently and said he was on Raoma Island off Zanzibar. From Florida the beam heading was 180°.....the normal path for Zanzibar would be 83°. Down in the Falklands a VP8 found them coming in at 0°. the VQ1 said he was from HB9 and would be there a couple of months. Was at 14210kc/0455Z.

Then there was ZA5FB from Downtown Tirana at 14013kc/1125Z on November 18th. What does all of this prove? Only that the Great Days of DXing are with us.....and you might as well work them first and worry later because sooner or later you will learn that Slim is everywhere. He started as 8X8A from Cray Island and has been on a continuous DXpedition since then. Often QSOed....seldomed QSLed!

**QSLing a Chore??**

The World QSL Bureau will do the work while you get your needed rest.....

Relax!! At rock-bottom prices, World QSL Bureau will move your cards for 6¢ per card. Rake up twenty of those contest QSOs and they go for 5¢ per card. Bundle up a hundred and the unbelievable price is 4¢ each! Unbelievable!! Bundle with Orm!!!

**world QSL bureau**

111 Farm Hill Road Los Gatos, Calif. 95030

29 November 1977

MORE SHORTLY NOTED The early operations from Juan Fernandez by Dr Austin Regal and Bill Poellnitz brought a strong signal from their operating position. CE0ZM should have produced a big total of QSOs during the CW WW CW TEST this last weekend.

Though N4WW and K1MM would like to make a San Felix--CE0X stop, it was not feasible on this trip. While in Santiago a week back, they were checking into possible arrangements for transportation for some future planning.

QSLs for the CE0ZM operations....as well as CE0ZD.....can go to Dr. Regal at P.O. Box 14882, Orlando, Florida 32857. Any items that come their way in the way of support for the Juan Fernandez operation will be used to get a San Felix operation on the tracks.

PY0ZAE QSLs continue to come in....always finding a delighted one at the receiving end. During recent weeks there appeared to be nothing but JY7s out of Jordan. Red Eyed came up with eleven different active ones.

3C1X from Equatorial Guinea continues to be reported but not with all the numbers of the early operation. He is supposed to be there for some weeks yet. Band conditions were not especially good before the Test last weekend and this probably has cut down on some of the activity.

TU2GA says that he is often on from 0640Z on Six Meters. The two frequencies for 6mtrs in the Ivory Coast are 50.05MHz and 50.95MHz. TU2GH says that he has been working ZLs on the short path on Six. He also says he has been work 6W8AK on two meters....this about a 900 mile haul and has been doing it regularly.

ARRL notes that YV5ZZ and LU1DAU managed a two-meter contact without the use of satellites or EME. This amounted to a 3135 mile QSO on two meters. It took two years of scheduling and broke the old record of 2540miles set by W6NLZ and KH6UK back in 1957.

W5UFF tried both direct and via DL7FT for a QSL for FC9UC. Got them both ways though one route was just a bit faster.

The ZLs who put on the successful Kermadec operation say that QSLs will be coming out in January. It looks about sixty more days at this time but they are moving to get them back to the Deserving.

VE4ACY who used to be A2CCY has found the temperature in Winnipeg down to -15°C. Bob never found anything like that in Botswana and thinks of those days of other years when he was warm.

There is a report that Erik, SM0AGD, is back in Sweden from his latest trip to the SouthEast Asia and Middle East places.

The W7PHO Cathering continues to draw in a lot of DX. In mid-November a quick check showed 9M8/9M2/KC6/CR9 and a number of other semi-rare ones checking in regularly. The Africana Net at 21355kc from sometime after 1700Z is attracting a lot of the Africans including ZDs.

There continue to be rumors about possible South Sandwich operations. Like a lot of other things, a South Sandwich operation will come some day....but not soon enough.

As far as we can recall, there has been only the original LU-operation from South Sandwich which brought it DXCC status, and the VP8 operation a few years later. The logistics for a South Sandwich operation are formidable and it is doubtful if there will be any activity unless it hitches a ride on some large naval vessel....or research vessel....going there for other reasons. Ships do operate in the vicinity of the group and there are occasional landings on some of the islands. But do not look for someone....on the spur of the moment....to jump into their little ol' boat and head out to put South Sandwich on the air. It most likely will not happen that way and there should be sufficient advance information. There are a lot of amateurs in that part of the world who would like to find the opportunity to activate that one...

Some will find in their Atlas the South Sandwich Group listed at 57°S and 25°W. They are strung out over some distance. South Georgia is at 54°15'S and 36°45'W. Definitely south of the Roaring Forties and well into the Furious Fifties.

The ARRL, noting the problems with court cases involving interference and zoning problems that some amateurs are coping with, authorized the use of the unallocated funds from the Minute 60 action of the July 1976 Board Meeting to be used in helping with these cases.

There is also a report of two amateurs in the Louisiana country being convicted in court for obscenity and interference to a repeater.

## ***DX 10 years back***

November 29, 1967

Don Miller was filing suit against the ARRL for some of the DXCC actions on his operations. The big irritant being that they would not accept them DXCC credit. For those who came on to the scene a bit late, this ended up both as a tactical and strategic error....for Don Miller.

The Colvins were at TY2KG in Dahomey and were thinking of moving on to Nigeria for their next stop. VQ9JW was on from Aldabra....3Y0EB was expected.....PY0AQB was on from Rochas Atoll....some were hoping it would count for St Peter and Paul Rocks. It didn't. Don Miller was in the CQ WW DX Test from 5R8BA.

(e = eastern states    m = middle states    w = western reaches    ve = nova scotia    ep = iran, etc)  
 (all times in gmt    # = long path    ??? = Slim?? Again! And in Tirana this week!    Wow!!!)

SOME SHORT NOTES So far this year WSUSM says that One-Sixty to Europe has been below the last two years in propagation to Europe. The activity has been down also. The JA-path is about the same as it has been in 1974 and 1975 and for twenty minutes to a half hour around sunrise is often very good. Activity to the Pacific is off. There often are good conditions to South America but little activity and to Africa the conditions seem to have been poor...

Some of the problem may just be lack of activity. Bill would like to see a few more trying the top band. With a lot of the rigs in the amateur shacks these days, it sometimes does not take much trying.

We have received a mixed bag of what the calls from Bophuthatswana will be. This week it seems to be a bit definite that it will be H5....but some are reporting H5A. All the doubts will be dissipated next Monday about 2200Z. Don't argue that the call you hear is not the one you were expecting....jump in and work 'em.

VE3FXT is planning to move on to S88 after he gets the homeland Bophuthatswana organized and you may be hearing S88FXT.

3D6BP, Harry, will be home in Christmas for the holidays, he will be visiting his mother in Yorkshire. Harry has been talking of visiting in the states in 1978 and is planning a possible trip to Australia to visit his sisters there in 1979.

Harry will probably be in Swaziland for some time. He has permission to stay until 1983.

5H3KS is being heard from Dar Es Salaam on the east side of Africa. QTH is Box 250, Dar Es Salaam... gives his handle as Karl. Some are asking about C3PO. Canadian or Star Wars? S4KY said he was on a mobile oil rig off Venezuela.

W9DWQ is looking for QSL routes for SW/WGG from March 1975...ZD7RS from February 1975 and 5R8AA from January 1975. Nothing has worked so far. WA4TWE is also on Diego Garcia and is working with the two other operators being heard. Most days on short path from 1200Z....long path on some days from 2200Z. Around 14240kc. VU2KMK goes to N7UT....we listed it as W7UT.

8Q7AD was heard last week.....14207kc at 1350Z. Said to QSL to JA1UMN. There for another month. Burundi is supposed to be off the air. However, we got a report that the government there issues licenses to missionaries in the country for communication purposes and not being exactly sure what kind of a license they should have, they have been issuing ham calls and assigning them to the amateur bands. Generally they are only on forty meters for within the country communications but there is nothing to keep them off other bands. 9U5BP who used to be heard from Burundi is still living in that country though he has not been on the air for five years or so.

Those asking for the QSL sheets....we ran out of the first couple of numbers and will have to print some more. Until we get the full file, we are holding up the requests. Actually we are out of No. 2, low on No. 1 but with plenty of others. No. 6 may be showing one of these days.

The XYL of JY7DI...that would be JY9YL, is expecting a 5B4 license soon. The audio from 3C1X makes it difficult to read him in the pile-ups. There have been some reports, without confirmation, that Erik may travel to 3C-land before long.

Keep checking long path. There are some good signals coming 180° from what you would usually expect. And remember the good condions early in November....with ten meters wide open. It won't be long before the 27-day cycle turns up again and you may find those good conditions again in early December.

There is a log of good DX around.....all you need is a vacation to work it.

29 November 1977

# CALENDAR

BOPHUTHATSWANA	Flock of H5s from 2200Z Tuesday, December 5th
EQUATORIAL GUINEA	3C1X there for a couple of more weeks
AUCKLAND/CAMPBELL	ZLs going home from MacQuarrie may stop for a couple days
MALI	VE3HRS/TZ for a couple of months
SPANISH PHONE TEST	December 3/4th.....this weekend
ARRL 160mtr TEST	December 2/4th.....this Friday
SPANISH CW TEST	December 10/11th
HUNGARIAN TEST	December 10/11th
VU CW TEST	December 10/11th

CHINA There have been a couple of BYs showing in recent weeks. BY9 and BY6.  
Slim.....as always. But....

The Minister of Communications in mainland China is reported as having been visiting in Japan in recent weeks. There have been indications that a look at the electronic industry and the scope of amateur activity in Japan was a matter of distinct interest. There are also reports that he talked with EARL during his Japan visit.

Someday amateur radio will come to China. The odds still are that when you hear a true-blue China station it will not be signing BY....and that it will be a local and not a visitor doing the operating.

Keep alert! A couple of years from now something might be developing. Japan now has over 450,000 amateurs and expect to top the million mark by the mid-eighties. Those figures would impress most anyone.....

MORE SHORTLY NOTED The rig being used by LI2B is reported to have been loaned by W2KGO. It is also reported that that big pile-up came while they were tied to a dock at Basra....in Iraq. That was the big pile-up on the 23rd.

Also out of the east comes the report that one of the ELs in Liberia is trying to get permission to just step across the line into 3X-Republic of Guinea and to do a bit of operating. If you think that DX has been forgotten and that no one is working to bring you all those needed rare ones, just think of all the zigging and zagging going on. Definitely, DX will rise again!!

On the back page are the results of the ARRL elections. Note that there are more and more DX types showing up on the rolls of the hierarchy. If there is one in your division, it might be provident to drop a note of congratulation. There in the Pacific Division two members of the Northern California DX Club won in the elections. There are a number of other DXers in the winners circle.

Some of the prices on CB gear have been hitting the skids and are hard to believe. Look at some of the newspaper advertisements. E.J Johnson is closing one of their two CB plants because of the deterioration of the C.B market, the plant at Clear Lake, Iowa being closed. Johnson blames the impact of gear being imported as the reason for the closing of the plant. The company lost \$8.4 million on sales of \$42.6 million in the first nine months of this year. Last year it was \$5 million profit on \$79.1 sales.

JASUI/PZ has shown on fifteen meters.....1802kc at 0330Z on November 15th. W5USM says it is the second PZ to be heard in three years. QSLs to JA8AHA.

**APPL** The count has been made in the Board of Directors elections and the contests came out....

**WEST COAST DX BULLETIN** Published every week by the Marin County DX Group. One of the local QRPers came up the hill last week on the holiday. Ostensibly, he came to wish us well and stuffing like that but it soon developed that he also brought a question. "How about that VQ1BC that was on last week," he said. "That could be a good one, couldn't it?" Now most everyone knows that VQ1 vanished perhaps forever back in 1974 but there is always a hope that some day you may trip over a DX pearl. "It could be," we said cautiously, not wishing to smash a dream so quickly, "but the beam directions did not add up." The QRPer was still hopeful. "I know that," he said, "but I have also been told that our propagation off a beam may not necessarily follow what would be great circle paths on a sphere. That because of the Van Allen belt, the magnetic fields of force around the earth are not spherical but more like a doughnut with the hole being in the vicinity of the north and south magnetic poles." All of this was getting interesting and this QRPer was obviously one of the better Marin QRPers. So we urged him onward. "So really you cannot count on the Great Circle paths," the QRPer continued, "because you are operating more like inside a doughnut and the paths that get close to the magnetic poles will not always follow the expected great circle paths. Right?" We had to think this one over for we too had noted in other years the unexplained and unexpected paths. Such as the time when we worked Don Miller on Heard Island with a beam heading of 350. And after thinking a bit we had our own question. "Where did you say you heard the VQ1?" we asked. For when skepticism and need are in conflict, one must push skepticism and doubt and the turkey aside and start preparing to jump in and work what may be the DX pearl you have sought for years. For there is still gold in the DX lode and far wave-washed beaches where the DX pearls are strewn. And right now we are in a bit of a hurry to listen for that VQ1 but should you need a full year of hints on the hidden trails to DX treasures, \$14.00 will bring it by second-class mail in the U.S. for a full year. \$18.00 roars it off to the U.S./VE/EA areas by first-class mail while \$20.00 a year flings it all over to the DX lands. And don't stop to question what a VQ1 might be doing on now, jump in and work them first....one of these days it will be a pearl!! Maybe....
