

May 2, 1979

18-79

ABU AIL If OE6XG/A has not been heard by the time you get this issue in your hand, you should be alert for the time is near!

There have been some minor changes from last week bulletin. First, the Italian operator we could not nail down turned out to be Giampaolo Forti, I2FGP, home from his 601FG operation in Somalia and turning right around to head for Djibouti and the Abu Ail operation.

Those delighting in the c.w. mode were jumping with joy when it was learned that Giampaolo was part of the team. A top c.w. operator, it should be the answer to the c.w. man's prayer.

Some slight changes have been given for the operating frequencies, not of these much off the previously published frequencies. They are up-dated and should be -

CW 3505kHz 7005kHz 14027kHz 21027kHz 28027kHz SSB 3798kHz 7085kHz 14195kHz 21295kHz 28595kHz

Even these are subject to some slight shifting one way or another but once they are organized, there should be little trouble in finding the action.

QSLs will be handled by WA3HUP. The Northern California DX Foundation will be printing the cards for the DXpedition and they will be ready as quickly as possible. The Foundation has also come up with support for the effort, advancing funds to help make the operation possible.

NEPAL 9N1EMK will be on the air from May 2nd to 6th, both on c.w., and SSB. This is an operation by JASEMK,
Hiroto Sasaki, who several times was reported in April. This is also a chance for working Nepal on c.w., a
mode not often available.

Hiroto will be found generally around

c.w. 7kHz above the lower band edge, ten through eighty meters.

SSB 14170kHz 21270kHz 28570kHz...on twenty meters he may at times QSY up into the American phone sub-band.

QSLs will go to:

Hiroto Sasaki JA8EMK Box 150 Asahigawa Hokkaido, 070-91 JAPAN

SAE/IRC needed.

FRANZ JOSEF Some spent a lot of April in anticipation but the expected Franz Josef operation did not show.

Hope is not dead....yet. It seldom is when you need the country. Maybe it will come tomorrow. Then again, maybe it will not.

Recently UA10E advised WhORT that there will be no Franz Josef activity until this July. Some of the UA-sources which in the past have advised on possible Franz Josef activity have not come through with any up-date and it is the waiting time. From the number and strength of Franz Josef reports a few months back, it does seem rather definite that something may be developing.

UK1ZAA who is in the Murmansk area, advised KH6GI recently that the only station on Franz Josef, UK1PAA, is crystal-controlled at 14030kHz but at this time is not active. However, the expectation is that the station will again be heard when Spring comes again to Franz Josef land.

West Coast DX Bulletin 2 May 1979

SUNSPOT LOUIE The NAXX forecasts have been right in there in recent weeks and looking across the Abu Ail operation, it might be expected that things will improve towards the end of their run. Once you hear your call come back, things always do improve.

Even during periods of disturbed conditions you can encounter some spectacular DX happenings. Though these at times are brief, they can be interesting. Keep listening. Always the best way to hear one you may need.

NLXX notes that the sun seems at times to be strangely quiet for this period of Cycle 21. Often these lulls are noted as the increase in activity plateaus and after resting a bit, the line takes off for the high areas. No one is saying...yet...that the end is near. Most are saying that the rest of this year and through 1980 DX should be there for the Deserving. Some days good, some days spectacular and on some occasions even better than that.

igh
end is
s year
Deserving
n some occasions

W6RQ
25 Apr 79

Looking down the long road to the summer months and the times of the suburban dandelion hunt, NAXX says that the first part of May should be a time of unending delight for the DXer, the needle is stuck in the high ranges.

| May | 2nd | Disturbed | 1-1-1-1 | | May 7th | High | Normal |
|-----|-----|-------------|---------|---|---------|------|---------|

| | 6th | High Normal | | | 11th | High | Normal, |

We do not have the late KH6BZF solar data this week, Lee being away from the office and what was on hand was for mid-April. We will catch up next week, meanwhile just look at the chart and be convinced that the Great Days of DXing are here.

Down in the border country Ev keeps heaving at the flux line and says that he wishes that he could say that the Great Days of Solar Flux are here. The Ap is a bit higher than is needed but just stick around and the flux will be above two hundred, the Ap will be down and the loud signal QRMing your QSO will possibly one of the deep Russians. But for now, keep the charts up with....

| So | lar Flux | Ap Index | | Solar Flux | Ap Index |

QSL?

Computerized listing of over 3000 QSL managers. Directory includes both stateside and foreign managers. Updated weekly. Most accurate source available. Cost: \$1.50 (U.S/VE/XE) - \$2.35 (Elsewhere)

Cost: \$1.50 (U.S/VE/XE) - \$2.35 (Elsewhere)
Gary Yarus, WBØMSZ, 921 N. Clay., St. Louis, Missouri 63122

PAIMYRA Peter Sutter will be departing Marin in a couple of weeks, heading out on his 36' sloop for Hawaii, Christmas, Washington, Fanning and Palmyr ands. He expects to be at Christmas in mid-June and at Palmyra around the first of July.

The plan is to spend a good part of a week at Palmyra, operating WD6GHZ/KH5. His activity will probably be all c.w. and he is aiming to show on forty/fifteen and ten meters.

Look for him at 7050kHz/21110kHz/28110kHz. He is using an ATLAS 350XL, a trapped vertical ashore for the antenna when at Palmyra and will work split frequency.

QSLs vill go to his home QTH, 214 Third Street, Sausalito, California 94965. Sase or Sae/IRC needed.

The 'WILD SPIRIT' will be maintaining schedules with some of the local Marin QRPers and the arrival at Palmyra will be up-dated in June.

| 170 QS0s | 760 | 2095 | 9810 | 9395 | 10,885 |

We have in the past heard of DXpeditions running up twenty thousand plus of QSOs but this is the first instance we can recall where the total was up into the 30K bracket.

It is reported that the two operators left Pitcairn on the Yankee Trader when it came through along towards the end of April. Some have asked about the reported plans of ZL1ADI for a possible Manihiki effort but there is no late information on this. It is a definite possibility as Charles Rademacher, ZL1ADI, was aiming for a number of Pacific efforts during 1979.

On other recent Pitcairn activity, VR6BJ, Bruce Frahm, made 753 contacts during the stop there, 193 of these on RTTY. VR6DX made 1100 QSOs.

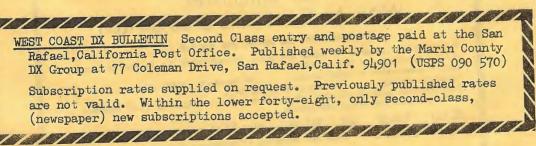

VR6 should be down a bit on the needed list for awhile, the c.w. activity certainly should have answered some of the demand for that mode.

FERNANDO de NORONHA This island at 3° 50'S and 32°24'W will be on the air starting May 12th in an effort by PY1APS and PY1MAG.

Look for them to start showing around 1800Z on May 12th or within a short time either way of this time. PY1APS was there in 1967 signing PY7APS/Ø and then made another run in 1968 signing PYØAPS. PY1MAG was there doing a few days of c.w. work in 1968 signing PYØMAG. The first DXCC ever earned by a PYØ station went to PYØAPS in 1971.

There is a possibility of some six-meter operation. Many JAs have been asking about this one and PY1RO is working on accumulating the necessary gear and a 6-element YAGI for this band.

QSLs will go to their home QTHs.....PY1APS and PY1MAG/ SASE or SAE/IRC needed....

MORE SHORT NOTES JA stations have heard BY2CT at 14316kHz. They are not optimistic at all about that one. The regulations in India are reported to have been tightened. You now have to be eighteen years old to get a license, formerly it was twelve. In the 80mtr band, the 3600-3650kHz segment is reported as lost and only the slot at 3890-3900kHz is available to the VUs in the 75/80mtr country. Novices are found only on forty meters, they being identified by the 'Z' as the first letter in the suffix.

The address for GJ3MBS/GU3MBS is:

Steve Gibbs 151 Le Genats, Castel Guernsey, Channel Islands EUROPE

GU3MBS is usually on c.w., phone being an occasional mode. Without going into t lot of details, it would be best to use this address for any QSLing for GJ3MBS/GU3MBS and no other route. Try anything else and there may be problems. Go direct, in this instance it may be about the only way. Some may recall that Steve was well known when he was signing VQ8CC. Just about this time ten years ago he and Gus Browning were on Rodrigues signing VQ8CCR.

New officers for the Mile-Hi DX Assn are: Roger Preece, WBØRTZ, President; Bob Pierce, WBØGJ, Vice-prexy; WBØHAD, Joe Hart is the Secretary/Treasurer. The Mile-Hi group are quick to point out that the Delta DX Assn do an outstanding job with their QSL duties, one member noting that efforts to get a TRSAC QSL was frustrated until the Delta group took over the duties. Result...instant QSLs!! All this shows that as had been said before, only one DXer really ever understands another DXer.

JR1EBD/JD1 on Ogasawara was due to pack up and return to the homeland in the last part of April. QSLs to JR1FYS. The correct address for TU2BX is: 01 BP 3557, Abidjan, 01 Ivory Coast. The callbook has it somewhat differently.

SVMAA/5 should be heard in early May. This is SVMVT(ex) and Jack expects to be in the islands for a couple weeks. You should check the c.w. bands, this is where is is almost always found. The islands in this instance being the Dodecanese Islands. The SV5 is the Dodecanese, SV9 is Crete. Later this year, in mid-summer, SV1JG also expects to go to the Dodecanese to sign SV1JG/SV5. This is Cliff who was heard last year from both the Dodecanese and Crete.

VR1BE in British Phoenix is: Ed Bennett, P.O Box 1337, Canton Island 96736, via Hawaii. Again, note that this is a U.S. postal address. VR1AY goes to Box 274, Tarawa Atoll, Gilbert Islands, Western Pacific. This is a foreign address. You QSL VR1BE with a 15¢ stamp, you QSL VR1AY with a 31¢ (airmail) stamp. Both of these often found on ten meters, usually within the first 10kc above the band edge, after 0100Z. 3D2MD is expected to be in A35-Tonga in mid-May and then later moving onto to VR1-British Phoenix.

Some have asked where YI1BGD has been. There it was Friday around 1430Z working even into the Western Reaches on twenty meters phone. Earlier in the night, around 0400Z they were taking a list for the Arabina Knights Net. The station is active, Friday is the best day to watch and with the FT-500 and a beam the signal is good. Majiid was doing a good business last Friday at the 1430Z time and was on his own...no list.

SABLE ISLAND Some VEs are planning a Sable Island effort for this summer, they already having authorization from the Department of Communications for the operation. There are a few more permissions needed for any Sable visit but the prospects are good. At this point definite details have not been released, however, the time period is July or August. More will come.

Modernize Your Amplifier With An Electronic Bias Switch

Now Models for the SB-220 and the LipB

Reduce heat generated in tubes and plate transformers due to idling current Extend tube life by 20% to 30%
Reduce generation of shot noise.

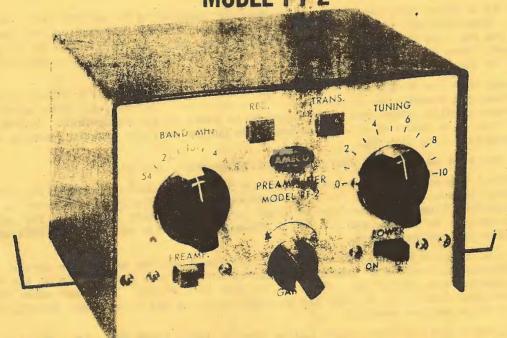

CW break-in possible.

Conserve energy Reduce your power bill
Professional Quality circuit board 5.6"x 1.6"..installs in 15-20 minutes
Soon!..models for other amplifiers

SB 220 \$39.50 LLB \$41.00 .. plus \$1.50 shipping charges
90 day warranty. Same day shipping if accompanied by money order

MADISON ELECTRONICS SUPPLY

Now you can receive the weak signals with THE ALL NEW AMECO PREAMPLIFIER MODEL PT-2

A CONTINUOUS TUNING 6-160 METER PRE-AMP SPECIFICALLY DESIGNED FOR USE WITH A TRANSCEIVER

- Improves sensitivity and signal-to-noise ratio while receiving.
- Bypasses itself automatically when the transceiver is transmitting.
- FET amplifier gives superior cross-modulation protection.
- Improves immunity to transceiver front-end overload by use of its built-in attenuator.
 - Provides master power control for station equipment.
- No modifications required to transceiver.
 Simple to install.
- Advanced solid state circuitry.
 For AM or single sideband.
- Boosts signals up to 26 DB.

\$74.95

Especially good for transceivers. Other Palomar Products available. Call Don at Madison Electronics on the DXers Hot-Line. Need help with questions on DX gear......Call (713) 658 0268. Ask for Don....he will help!!

MADISON ELECTRONICS SUPPLY

1508 McKINNEY HOUSTON, TEXAS 77002 SHORTLY NOTED AP2MQ. Mansur, has asked that the word be passed that the inclusion of green stamps, or similar items, in the envelopes sent for AP-QSLs can have some very embarassing results for the AP amateurs.

Incoming mail is often checked (opened) by the Pakistani postal authorities and when currency is found, they take the matter officially up with the amateur, the importation of foreign currency into the country being prohibited.

This is not an unusual condition in some countries and while the intent may be good, the results are something else.

There is a report that the number of Woodpecker' complaints to the FCC are up noticeably. Sometimes the effort to report interference is a bit frustrating and especially when you run into someone during the off hours who tries to shuffle you on to another. Persist. Some have found that the person at the FCC Monitoring Station has never heard of the Russian Woodpecker.

Some say that the Woodpecker is not being found as often these days, others believe that following him around does little good. Be a believer! Matching his code speed usually gets some results, sometimes a big increase in power by the Woodpecker. It has been noted that if a combined effort had been made months ago, the probably would have disappeared a long time ago.

Watch the band edges ... but don't flee the Woodpecker, join him.

The recent volcanic eruptions on St. Vincent in the West Indies found VP2SQ providing emergency communications for the local authorities. The station is reported as having phone-patched Prime Minister Cato to other islands when there was a need for quick communications in the emergency. Two forty-meter nets were set up at 7152kHz and 7164kHz to handle the emergency work.

Those c.w. frequencies for Abu Ail on twenty/fifteen and ten meters are crystal frequencies. You probably will not find them elsewheres. There are more dropping in on the Wednesday night meeting with VK2AGT/LH....this at 14255kHz from 06307. In recent weeks there have been stations from Fiji, Eastern and Western Carolines and a few other Pacific stops. Drop in for a relaxed meeting.

WA6AHF, Rubin and XYL Ferne, have had to give up their YASME QSL work. Their doctor said that it might be best to ease the burden. While giving up YASME, they will continue to handle the cards for the list of stations for which they are QSL Managers. While speaking of QSL Managers, a good way to arouse one is to work a station on a number of bands and modes, include a handful of cards in an envelope and only send one sase for their return.

Many apparently do not realize that in high total QSO operations that often the work is farmed out and handling such multi/single QSL SASE is a continuing irritation. Often these are tossed into the corner to await the time when the rest are cleared up.

With several workers scattered over a fifty or so mile radius, the multiple/ singles have to wait. If you want to make a QSL Manager smile, include a sase per QSL card enclosed. One on one....it works faster.

MORE RED EYED LOUIE REPORTS

Now, DXers, whoever you may be,
If you want to rise to the top of the tree,
If your soul is not fettered to a balky mule
Be careful to be guided by this Golden Rule———
Stick close to your lists and never loose your hold,
And you all may be atop the Honor Roll!

```

SHORTLY NOTED On that British Virgin Islands operation that has been on this week, there is a correction on the QSLing address...we were close, a couple of doors off on the street and up the road a bit on the ZIP Code. It goes to.....Woody Charlton, 515 Curtis Street, Albany, Calif. 94706. They were looking to sign VP2VEN...or something similar.

9V10I who has been on the injured list, got the fractures when he fell through the roof on the oil drilling rig on which he was working. He has been released from the hospital for further convalescence and he's moving his QTH there in Singapore. He was looking for an apartment house where his tower would be more appreciated. Being unable to do much of the work, he supervised while the local Singapore amateurs provided the muscle.

KH6IJ continues to be in the rehabilitation unit there in Honolulu, continuing to receive treatment for the stroke which has hospitalized him. He is visited daily by KH6D (KH6AI) who checks on the progress of his long-time friend. KH6IJ has his right side affected and is not able to speak. The convalescence looks to be a long one.

I6PQO is looking for DX Manager duties for a DX station. He currently is handling the QSLing for I6NOA and would like more work. I6PQO is Olimpio Porcellini, Via P.A Valignani 119, 66100 Chieti, Italy. Call Books prior to 1977 do not have his address listed correctly.

PY5WD has the logs of D2AZB from Independence Day there in Angola, November 11, 1975, to December 15, 1976, and is ready to confirm contacts. All you need is send a Sae/IRC to: Waldemar C Dias, PY5WD, P.O Box 63, 80 000 Curitiba Pr. ERASIL.

601FG says that if you worked someone using that call on twenty c.w. back in March you probably were working Somali Slim. Giampaolo says that he was only using SSB on twenty meters, it was c.w. on fiftten meters.

CALENDAR

Should be on now....OE6XG/A until next week ABU AIL FERNANDO DE NORONHA May 12th by PY1APS and PY1MAG..... From May 5th for about five days....possibly VP2VEN BRITISH VIRGIN IS. VK/ZL/OCEANIA TEST June 16/17th

MARTS SEANET TEST CW Test....July 21/22nd....Phone Test Aug 18/19th

MORE SHORTLY NOTED The Warrington and District Amateur Radio Society will be out in force on July 1st signing GTLEJA on both SSB and CW. The special prefix will mark the 1000-year anniversary there on the Isle of Man.

The GTLEJA effort is aimed at some fund raising for work with handicapped children and any contribution sent with the QSL will go to that work. QSLs for this effort will be handled by GLEJA and the address is: P.O Box 59, Isle of Man, United Kingdom.

There are a number of 9N1-calls showing up, these being apparently freshly minted types, and while some do not seem to ring just right, some apparently are the true-blue tupes. HS1ABD says that the callsign 9N1YU was used by a Yugoslav mountaineering team who were on an effort in the Mt. Everest area. Fred also confirms that 9N1BMK was by JA8BMK who was in Nepal on business.

Also, some new STs are showing.....ST2FF and ST2MM were heard around 14253kHz at 1500Z a week or two back. Also, it is reported that the Italians heard the 6U-prefix mentioned in last week's bulletin. Also, some of the EP2-stations are being heard again, this indicating that things may be settling down a bit.

SPRATLY We've heard but one growl on the Spratly operation, this one tried but did not get through to 1S1DX.

Disappointment is always a sharp spur but, as Albert would often say, all things are relative, some more so.

And the appraisal of any DXpedition is usually based on whether or not you were able to work it. The good ones are the ones you worked!

When the crew departed Barque Canada there in the Spratlys, they left no trace behind of their stay. They did not want to arouse their neighbors. Jack, the skipper, spent a good deal of his time while on the reef in scanning the horizon for any drop-in types. None came.

The FT-901DM performed like a super-rig. Voltages varied from 150v to 280v and the rig handled it all. At one point the rig was dropped off the table but continued to work well. The guys for the antenna had their anchors in the water at high tide, the operating spot did manage to stay dry.

All the participants ended up with a good-size debt from the expense of the operations. It is still possible to help....send any assistance to K2TJ.

WEST COAST DX BULLETIN Published every week for over eleven years by the Marin County DX Group. One of the local QRPers was up the hill last week, and, as often happens, this one came bearing a problem. "It's all these calls I'm working," the QRPer explained, "I work one and I am sure I know where it is. Then I work a second and though it looks the same, they tell me it is someplace else. By the time I work the third I am really wondering. Can you help me?" We were properly sympathetic for often it is not just the young and trusting who are confused but a lot of the old fogies are showing the symptoms. "Tell us about it," we advised and the confused light faded a bit in the QRPers eyes. "First," the QRPer starts off with, "I worked this station signing KA1IW, where might that be?" We had to smile, this was going to be easy. "Iwo Jima," we snapped right back, "next one." The QRPer had a list. "How about KA1MI," he asked and our smile was broad. "Undoubtedly Minami Torishima, also known as Marcus," we reeled it off, "you will find it under foot-note 6 in the country list." The QRPer checked that one off. "Where is KAIDC," he asked, "which one of the islands would what one be?" For a mement we shought he might have impaled us but we did a fast shuffle and came up with the answer. "Oh, KA1DC is Dave there in downtown Allston, Massachusetts," we said and we started to see the return of the bewildered look in the QRPers eyes. "You are beginning to lose me," he said, "but lets try another. Years ago I worked this station signing 7J1RL. Along the way some DXer told me that it was Baldwin's Reef but I cannot find it in the country list. Does that one count for anything?" Our smile of a practicing eruidite DXer was shining even more. "That's the one you will not find listed amont the prefixes in the country list, there is no 7J listed at all. But if you check you will find it listed with the JDs....JD for Minami Torishima, JD for Ogasawara and JD for Okino-Torishima though no one ever signed JD from Okino. Check the footnotes and though you will never see 7J1RL mentioned, footnote 26 does refer to this operation. Actually of this is easy when you understand it." At this point we were sure that the QRPer was understanding the logic of all of this and would be a happier, contented and more understanding QRPer in the future. We may have been wrong. "I don't think that I will ever understand it," he advised us sadly and tore up all his notes. We held up a hand to get his attention. "Let us run through them again, we will review the JD4s, the KA1s and all the various aberrations like 7J1RL. Ready?" The QRPer shook his head. "I may be a young one," he said, "but I doubt if I will have enough time to learn them all. I will just continued to be confused." And with that he was on his way down the hill, perhaps never to return. All of this is simple once you understand those callsigns, the problem is getting to understand them. But for practice you might scan our moveable subscription rates, we printed them up a year in advance. We may have been puzzled only once, others have been for the full year. But write if you want the test...
