

WEST COAST DX BULLETIN

June 20, 1979

REVILLA GIGEDO There was some guarded references to this one a few weeks back but since the last issue all the story has come out. Look for it this week end with a crew out of Mexico City and other places signing XFLMDX.

The group is planning an all-band effort.....eighty through ten meters. Both c.w. and SSB are planned, the amount of activity in each mode depending to some degree on the final crew going on the operation.

Look for them to open up about 2000Z on Friday, June 22nd. They plan to operate for three days and to secure at 2000Z on June 25th. Six operators were in the crew last week, two of them c.w. types. They said to listen for them at:

SSB: 14195kHz listening 14200kHz and up.
14190kHz will be used for operating transceive working others than the W/Ks

21295kHz listening 21300kHz and up
21240kHz will be a transceive operation for others than the W/Ks

28495kHz listening 28500kHz and up
28490kHz is the transceive frequency, etc.

On the lower frequencies low for XFLMDX at—

3795kHz listening 3800kHz and up

7095kHz listening 7170kHz and up
7090kHz transceive

CW: CW frequencies will generally be around 25kHz up from the bottom of the band but subject to some slippage either way. Start your search pattern around the 25kHz area and you should pick them up before long.

Mentioned as operators have been XE10K, XE1FX, XE10W, XE1GHM and XE10Z. There may be and probably will be others in on the operations but this was the list last week. The group is out of the Mexico City DX Club and the QSLing will be handled by that group. Send yours to:

Mexico City DX Club
Box 21-167
Mexico City 21 DF, MEXICO

The group was planning to fly out from the mainland, leaving early Friday and arriving on the island during daylight hours. They will immediately set up a station and start handing out XFLMDX QSOs. They plan to keep three stations going and to run up a big total of QSOs.

Activity from Revilla Gigedo has not been heard for some years, XE1J often being the action there for a long number of years. This year the Mexico City DX Club is going to cut down some of the demand for this one.

WAKE ISLAND Dan Lynch, WD6CDU, reports that he has permission to operate from Wake Island and will be there at the KH9-stop from July 10th to July 18th.

Dan will take his own gear, this including a back-up rig and these are TS520s. He is scouting for a small beam and linear and plans to work SSB only.

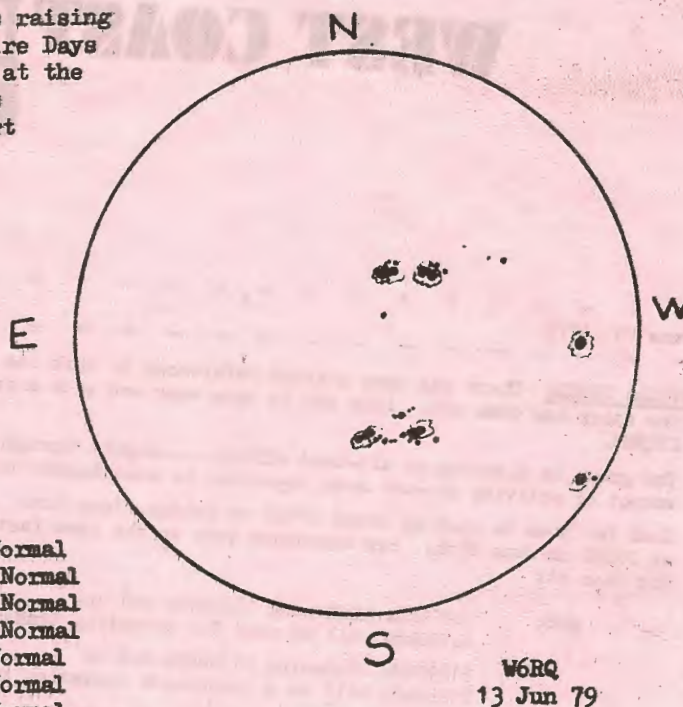

Look for him at:
28510kHz
21440kHz
14280kHz

This is an individual effort and all QSLs will require a Sase or Sae/IRC. He is going the whole thing on his own. QSL to: Dan Lynch WD6CDU, 7231 Kensington Court, Highland, Calif. 92346.

From what we have picked up along the way, it appears that there is a weekly resupply flight into Wake for the military base there. No other regular transportation seems to be available and any stop or action on the island will be for a week. Occasionally a ship does stop but most of the travel is via air.

SUNSPOT LOUIE Some may recall when N4XX was raising his voice and shouting: "Repent!! The Dire Days are coming!!!" At that time some looked at the chart and wondered what was coming besides Skylab. But if you look at the solar chart masterfully engraved by W6RQ you can see now what Ted was seeing then. This chart has some activity but by the time you read this most of the action will have turned the western limb.

But things do not last forever, even the sad notes, and if you can last until you get a bit further down the page you will note that the days of HN and AN are not far off. In fact, hardly being able to wait to get to the yeoman work that K6EC has done with the Solar Flux, we will run in N4XX's report right here.....

Jun 20th	Below Normal	Jun 27th	High Normal
21st	Below!!	28th	Above Normal
22nd	Below!!!	29th	Above Normal
23rd	Low Normal	30th	Above Normal
24th	Low Normal	Jul 1st	High Normal
25th	Low Normal	2nd	High Normal
26th	Low Normal	3rd	High Normal

Most everyone keeps waiting for things to turn upwards and take off but though it's coming, that's for sure, no one is quite sure just when.

Remember when K6EC down in the border country promised that if he could get a long enough lever, he'd pry the flux over the 200 mark. Well, take a look what Ev did with the flux in early June and stick that on your charts!!

Solar Flux Ap Index				Solar/ApIndex			
Jun	4th	234	7	Jun	8th	236	12
	5th	224	6		9th	245	12
	6th	229	18		10th	233	14
	7th	231	22				

A major solar storm was expected from the middle of last week and to last into the first part of this week. The flux was above the 200 mark from June 2nd up to the 13th, possibly beyond.

Prepare for the good times, they are coming. They always are!

**An expert
tells you
how**

How is the chance to learn all about propagation and expected band conditions. All in one book!

THE SHORTWAVE PROPAGATION HANDBOOK has just been published. Written by two leaders in the study of propagation forecasts, George Jacobs, W3ARL, and Theodore J Cohen, N4XX, it explains all the facets of shortwave propagation in simple language.

It is filled with information for the do-it-yourself DXer. It shows how to predict propagation conditions to all areas.

Personalized signed copies available at \$7.50 each postpaid. Order from Mail-A-Prop, Box 1714, Silver Spring, Maryland 20902. Signed by an author, get yours today. Foreign remittances should be in U.S. funds and add \$1.00 for postage.

West Coast DX Bulletin
20 June 1979

BENITO JUAREZ ISLAND We had the front page of the bulletin rather well set and then we found out about this one.....XF4J--- was due to show this last weekend, June 17th and they should be there until Thursday.

Benito Juarez? "Oh, that's the new name for what they used to call Revilla Gigedo", they tell us. So rather than the Mexico City DX Club operation expected this weekend, the schedule was shaping up for two operations.

The group was planning an around the clock operation. It may take a chart to help figure things out--

40/80/160mtrs XF4J---Pepe the operator and QSL to:

Box 200
Colima COL
Mexico

10/15/20mtrs XE4IX Pete QSL to

Box 30
Guadalajara Jalisco
Mexico

CW-All Bands XE4EH Rick QSL to

Box 30
Guadalajara Jalisco
Mexico

On SSB look for them around 14195kHz and listening up above 14200. When working into Europe or other DX areas, they will be found at 14190kHz and working down. CW should be around the 025 area but this should not be a hard one to locate. On the other phone bands, check the usual DX Frequencies. All this came to us in mid-flight. If you did not find them over the weekend, it may help to listen.

HV3SJ QSLs Last November DJØYD operated HV3SJ for a couple of days and the QSLing for this one has been a problem. When he wound up the operation, he apparently took both the original and carbon copy of the logs and those thirsting for a HV3SJ QSL have thirsted in vain. But wait!!

All things most always come to him who waits. Clyde Schoenfeld, W6KNH, last week received by surface mail, three months enroute, 45 pages of HV3SJ logs covering the activity on November 11/12, 1978. Previously Clyde has returned an estimated 200 requests for QSLs, not having any log information. However, with the arrival of the awaited items, W6KNH is ready to deal. Send Sase or Sae/IRC if you want a HV3SJ QSL for that period.

FCC The FCC Monitoring Office at Anchorage is responding with a from letter to those who answered their citation for working HS-Thailand Stations. The letter does not mention that the citations were erroneous, only that in view of the reply the matter is being closed.

As every good bureaucrat knows, you have form letters for everything except to admit that you were wrong. As you never are, no such form letter will ever be needed.

WEST COAST DX BULLETIN Second Class entry and postage paid at the San Rafael, California Post Office. Published weekly by the Marin County DX Group at 77 Coleman Drive, San Rafael, Calif. 94901 (USPS 090 570)

Subscription rates supplied on request. Previously published rates are not valid. Within the lower forty-eight, only second-class, (newspaper) new subscriptions accepted.

KIRIBATI/BANABA Something is stirring out along the mid-Pacific line. Down along the equator where, as Rudyard would often say, are those islands where the long-backed breakers croon, their endless ocean legends to the lazy, locked lagoons.

In mid-July, about July 14th, some of the British territories will be going independent. Here is the line-up and, admittedly, this may be subject to some changes. The interesting part being is the possibility of some new DXCC counters showing up after the change.

Ocean Island, as relayed by VR1AF, will go independent on July 14th and will be then known as "Banaba". Ocean Island is in the western portion of the Gilbert Group and a bit SSE from Nauru.

We also have a report that VR1-Gilberts, VR1/KB6 Phoenix and VR3-Line Islands will also go independent and will be known as "Kiribati". This also is mentioned for mid-July.

There is a possibility that with all the changes that VR3-Christmas may be a new one. though at this point the criteria that may apply is not quite clear.

Keep listening. All this probably will fall into line somewhere along the way but all we are sure of right now is that things are changing.

GUINEA-BISSAU It is reported that C5ABK has permission from the government in CR3-land to operate for two weeks in December and that he will be there the first two weeks in December. Keith has been working to get the okay to operate and apparently has met all their requirements. He has also run the operation by the ARRL DXCC Desk it is reported and as it passed, everyone stood and saluted.

Tentatively set to open December 1st, C5ABK is accumulating equipment and will take beam, amplifier and everything needed. QSLs will be handled by G3LQP.

SHORTLY NOTED It might be noted again that John Attaway, K4IFF, CQ's DX Editor, is looking for information on activity aimed at the CQ WW DX Tests this fall. John wants to know of anything developing for the CQ WW Phone Test on October 27/28th or the CQ WW CW Test on November 24/25th. Send to John at Box 205, Winterhaven, Florida 33880.

On the June 13th issue we had production problems. We finally got things together but could not get all the second class into the mails on Saturday. Being afraid to mail them on Sunday, they always seem to disappear for a month when we tried that, we held the remaining 700 copies up to go into Mondays mail. If some showed a day or two late, you'll know the problem. Things are better for the June 20th issue and we are optimistic.

We are always a bit delighted when operations show as announced. The Okino Torishima operation has been banging away with a good signal. Not an especially fast operator but a persistent one. It seemed as though there was but one operator but this one was working pretty much around the clock. Hardly possible but that was the way it seemed.

Erik showed from Laos signing SM0AGD/XW8. He had a good signal on both c.w. and SSB. It is reported that Erik suffered some injury falling through a window while trying to get antennas up and this may account for the delay in showing. He did come and added another country to the long list of rare to impossible ones he has managed to activate. We are still always a bit surprised to find so few DXers recognizing Erik when in our opinion he has consistently been one of the top DX operators in recent years and especially in putting the rare and needed ones on the air.

DLA!

20 June 1979

MORE SHORTLY NOTED The hope for the TH8JM operation is getting a bit thin. It seems that no one wants to issue documentation for the activity and the ARRL DXCC Desk is not expected to accept the cards. John Montague is expected to have a true-blue TL8-license in his hand any time now and it starting all over again if you need that one.

TR8AC and TR8GDC are expected to move up to Alexandria, Egypt, later this month and will be there for a couple of years. Some SU-activity can be anticipated.

PH8YL says she will be on vacation during July and she plans to operate daily. Early this month she was at 14240kHz at 0300Z. If you are looking for an ET3FMA/9E3FMA/9F3FMA QSL for action in the 1965-1968 area and some apparently are still looking, send an sase to Don Murray, W4WJ, 19700 NW 5 Ct., Miami, Florida 33169. Don has the logs in hand, it was he who did the operating. W7WLL has retired after tending to the QSL chores for years but Don is still willing to trade...one QSL if you are in the log for one Sase.

XT2AV goes to VE2DFR and VP8QE to K8FU. C21MF who has been showing on twenty phone around 1200Z goes to Box 162, Nauru. He says that Nauru post office not taking IRCS. This is not the way it should be but sometimes it is hard to fight city hall. Some are still looking for QSLs for 3X1X but it is not anything but a wavering hope. For the long-haul, the December plan of C5ABK may be a better hope.

ON4UN caught CR9AJ on seventy-five meters recently and crossed off Zone 26 in his WAZ search. This completed his 5BWAZ but he still needs four QSLs plus the CR9AJ one.

Larry Brockman, N6AR, is looking for contributions of old Handbooks, these going direct to 9J2TJ who teaches classes to students there in Zambia. Send direct....Fr. Frank Woda, Box 28, Chisekesi, Zambia.

WD6GHZ reached the Hawaiian Islands on the WILD SPIRIT, 16 days out of Sausalito. By this time he will be headed down to Christmas Island and still looks to be at Palmyra around the first of July. Check 7144kHz around 0600 for the schedule that is being kept with W6-types. This may also be the area where you'll find the K75-Palmyra action starting.

Correct QSL information for ZS2MI is: WA2IEN, 255 Route 17, Upper Saddle River, New Jersey 07458. Our programmed typing got things a bit out of sync.....

(e = eastern states m = middle states w = western reaches kh = hawaii, etc. all times in GMT
{# = long path ??? = Slim....busy last week. Heard as HA5MA/ZA from downtown Tirana and then as XW8AA from
(downtown Vientiane.....c.w. most always!!

SOME MINOR NOTES Lampedusa Island was due on last week. This was due last Thursday, June 14th and was to run until this Wednesday, June 20th. They were signing IG9BVS and IG9DMK. If you caught them, QSL via their some suffix.....BVS to I2BVS and DMK to I2DMK. I2DMK is Max Di Marco out of Milano. His QSLs go to Via G. Pascoli 60, 20133 Milano Italy. Its in Zone 33 for WAZ, AF19 for IOTA....

There was a lot of 8J3ITU action, they made over 20K QSOs during the ITU week. All QSLs will be going out via the bureaus, the JAs say they should arrive by Christmas. JH3DPB has a few of the QSLs on hand which he will surrender for a sase or sae/IRC....and the envelope had better be large as the QSL itself is large.

We got a couple more notes this week that IRCs are no good in certain countries. This is an erroneous impression and IRCs are legally good in all countries. There are absolutely no exceptions. The problem....again....stems from someone in some post offices not recognizing what an IRC is. They are not a big selling item unless there is an DXer in the neighborhood. But because a clerk in a post office fails to recognize it, it does not mean that that is the policy of the country. There would be no way to exchange international mails if there were no Universal Postal Union and IRCs are initially prepared by the UPU. Each country then obtains a supply and over-prints them for their own use.

We've said it a number of times but we still get reports that IRCs are no good in.....eastern Europe....RussiaPakistan.....West Germany, etc. Everyone of those reports are in error. If you are turned down, go right to the top but that's not here. Write to the postal authorities and do not take the decision of some minor window clerk. We know of one time when a clerk turned down a piece of U.S. Currency.. It was not the size he was expecting. It used to be bigger you know and before WW II an awful lot of it was still circulating in the Orient.

It's all good, sometimes better. Just like your IRCs.

ARRL Newington reports that there has been confirmation with the Panamanian government that the HP9 callsigns have never been issued for use on amateur bands.

The HP9-prefixes designates commercial maritime users and the holders of such calls are expressly prohibited from using the amateur frequencies. A warning has been voiced to U.S and Canadian amateurs that communications of any kind with HP9-callsigns, including third-party traffic, is not legal. This matter is covered in Part 97.89 of the FCC rules and DOS regulations Part 2, Section 51, Sub-section 1.

Vic Clark, W4KFC, continued to improve after his hospitalization for a heart attack and it was expected that he would be released from the hospital in Fairfax, Virginia, sometime before June 10th. A period of convalescence is anticipated and it may be some time before he is able to resume his heavy load of ARRL and IARU work.

WEST COAST DX BULLETIN Published every week by the Marin County DX Group. One learns after going to a number of class reunions that though a person might have been the most obnoxious bore in those other days, the fact that he and you are still here is often a redeeming feature. And it is all conviviality and fraternalism. And last week instead of one of the QRPers we had a surprise. Slim came up the hill. "Just happened to be passing through," he said, "so I thought I'd check and see if there is any rare DX scheduled for the next couple of weeks. I may be here today but you can bet I'll be there tomorrow." We had not seen the true-blue Slim for years but while there may be difficulty at times in understanding these culprits, there are also at times some interesting things to learn. "How do you keep it up?" we asked and Slim laughter was joyous. "Really," he said, "it is not difficult at all. Most any DXer is fearful of missing something and being afraid, they are ready to believe anything. You will find that DXers are the true-believers. There are no skeptics on the DXCC roster, that's for sure!" We had to think this over, looking for the single example to refute Slim's premise but right then could not come up with a name or a call though we were sure there should be one we'd remember when we got the time. "Tell us more," we said and it did not take much urging to keep Slim talking. "You've already noted that I'm mostly always on c.w.," Slim said, obviously delighted in recounting his own cleverness, "and you can figure that anyone who shows on phone with a suspicious operation is probably an ersatz Slim and not the sought-for true-blue type. You have to be careful with that type. But the true-blue Slim is usually on c.w., naturally, it is harder to recognize me there." It was good to get these details confirmed but we had to ask about the operations that were phone only. The was a good laugh on that one. "Let an operation announce for weeks that they will be on phone only and then let me show on c.w. and they all immediately believe. DXers want to believe. How do you think I keep going? They are an inspiration to bringing more rare ones up so they can work them. Look at Okino Tee last week. When there is nothing ready to come on line, I just pick a call at random, sign slant XU or slant ZA and tell them that I am there with special permission for an experimental station and that I will QSL 100% and I am overcome with believers. It's unbelievable the way they come. From all sides." And we continued. We talked beam headings and Slim explained that no matter what the heading, someone will think it's the crooked path though this usually is only found on paths close to the poles. Finally Slim had to go and as he stood up he gave us his final words. "As long as there are DXers, I'll be there," Slim said, "I think we need each other. I need them and they need me." That was already evident. "But how about 'Work 'em now, worry later' you heard DXers saying," we asked, "how about that?" Slim had to think about that. "Really," he said, "why bring worry into something that is so much fun. Should you tinge the joy of the DX you worked today, the new or the rare ones, with a worry about what it will mean tomorrow?" And with that he was gone. We were glad to see him come and glad to see him go. For there are things which are joys but also things we might be better without. But our moveable subscriptions rates, those who write these days are finding them a limited joy. But you'll have to write for we will not tell.....
